Compact LED Spotlight

Includes:

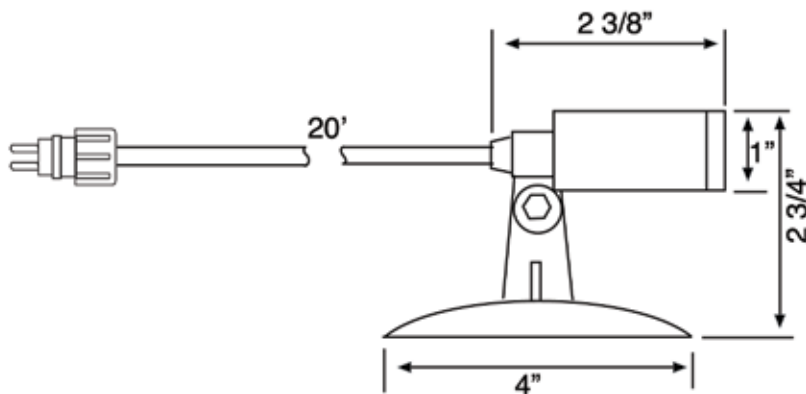

- 3watt compact high intensity spotlight with 20' power cord and quick connect plug
- Adjustable base
- Ground stake

CAUTION

- This unit must be installed in a circuit protected by a ground fault circuit interrupter
- For your protection, always unplug the transformer from the power source before servicing.
- This unit will get hot when used in an open air application, turn off power and allow unit to cool before servicing.

Introduction

The Sol Compact LED Spotlight is the smallest and most powerful bullet style landscape light available. The anodized aluminum body houses a 3watt high power LED that has a life expectancy 5X greater than traditional submersible lights. The 3000 K (warm light) color blends seamlessly with halogen and other incandescent landscape lighting. The body and LED carry an IP68 rating for submersible installation.

Installation

For your convenience, the LED offers three different mounting options:

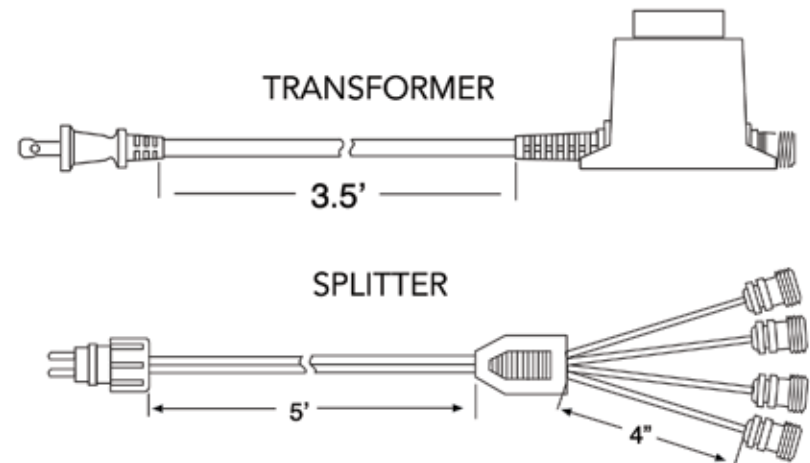

- Adjustable stand- for placement under waterfalls or highlighting areas in the streambed
- Ground stake- for use outside of the pond in conventional landscape applications.
- Nested- without stand or stake, among pond rocks.

It is recommended that lights be positioned facing away from viewers.

Once lights are installed, connect them to the transformer using the quick connect plug. If connecting light to an existing 12 volt system, remove the quick connect plug, strip and splice wires.

Warranty

All SOL LED lighting carries a one year warranty. This limited warranty is extended solely to the original purchaser commencing from the date of original purchase receipt. A misuse or abuse of this product voids the warranty. In case of warranty claims, the product should be returned to place of purchase accompanied by original receipt.

Transformer and 4-way splitter sold separately
