Tranquil Décor Vase Assembly Guide

NOTE: Vase/fountain/statuary and basin may vary from illustration. Use these steps as a general guide for assembly.

1. Determine location of basin in landscape and excavate hole. Ensure that the base of the hole is level in all directions. Place basin in hole and backfill, check for plumb regularly.
2. Put pump in basin and run cord through hole in basin top.
3. To install optional LED upgrade, remove tubing from barbed tubing ring. Connect the LED light ring to tubing and insert tubing into fountain from the top.
4. Be sure the tubing ring or LED light ring is pressed into the hole. Run the tubing through the basin top to the inside of the basin and connect with pump. Run the LED light ring cord out of the basin with the pump cord.
5. Carefully place fountain onto basin. If tubing was not able to be connected to pump or manifold in previous step, connect the tubing once the fountain is in place.
6. Cover the basin with decorative stone and fill basin with water. Leave access to pump for final flow adjustments to be made.
7. Connect the LED light ring with the transformer and plug in the pump. Make final flow adjustments and finishing covering with decorative stone.

Operation & Maintenance

1. Maintain water level to keep pump fully submersed. Add water as needed.
2. Algaecide or bacteria may be added to help keep water clear. Do not use chlorine as this may have negative effects on the pump.
3. In freezing climates the feature should be shut down and stored indoors. Remove the pump from the feature and store in a dry warm place until freezing conditions are over.
