What is the product used for?

As a foundation and reservoir for recirculating fountain pieces; houses the pump, plumbing, auto fill valve and water reserve.

When do you use this product?

When installing a recirculating fountain piece in almost any landscape or hardscape environment. The basin can be installed in ground or above ground depending on the desired elevation of the fountain piece.

How is it sized?

Basin size is determined by the dimensions and weight of the fountain piece it must support, as well as the desired flow rate and flow pattern that is expected from the fountain piece. The goal is to retain as much of the recirculating water as possible.

Special features?

Strong structural design, easy pump access, stainless steel pump access lid.

Complimentary products?

Aqua Bella auto fill valve paired with the 30 psi regulator, Stainless steel mesh sediment screen for top grate.

Specifications:

- Manufactured in the USA, using Medium-Density Polyethylene (MDPE)
- Can accommodate an optional auto fill valve
- 5 year warranty
- Easy plumbing installation through molded top grate holes
- Stainless steel access lid
